

Code-focused Generative AI App Development Assignments

1. Problem Statement:

Google Gemini Pro or ChatGPT-4 has [multi-modal capabilities, where you can do some visual question answering](#), i.e upload an image and ask questions on it as shown in the following streamlit app. Build a similar app using Streamlit and Google Gemini or any other LLM.

 **Visual QA Bot**

Gemini's response

The image shows a busy street in India. There are many people walking, driving, and riding on the street. There are also many shops and buildings. The buildings are mostly made of brick and have a lot of detail. The street is very crowded and there is a lot of traffic. The image is very colorful and has a lot of life.

2. Problem Statement:

Create an end-to-end RAG application using either Streamlit or Chainlit. Use your own custom dataset of PDF files to build this app and test some QA on your app based on your data.
